PROFESSIONAL SUMMARY

Engineer graduated from EPITA in Artificial Intelligence and Data Science. I design and build AI applications and backend systems, from business need to production. Experience in Python, cloud infrastructure, AI agents and enterprise integration. **2nd place overall at the Mistral AI Hackathon 2026.**

TECHNICAL SKILLS

Programming	Python, C++, C, C#, TypeScript, JavaScript, SQL, Kotlin
Backend & Data	FastAPI, REST APIs, PostgreSQL, Linux, Git, NGINX, Vector Databases
Cloud & Infrastructure	AWS, Docker, Terraform, OpenShift ROSA, Kubernetes, CI/CD
AI Engineering	LLM Agents, RAG, Tool Calling, LLM Orchestration, LangChain, Hugging Face, PyTorch, LLM Evaluation

PROFESSIONAL EXPERIENCES

AI Engineer Intern Safran, Paris Feb. 2026 to July 2026

- Embedded with Internal Audit teams to identify operational pain points and translate ambiguous business requirements into production ready software and AI workflows.
- Designed and developed agentic applications for document analysis, findings extraction, executive summaries and automated reporting using **Python, FastAPI, LangChain and AWS Bedrock**.
- Built backend services and contributed to full stack application delivery using REST APIs, Docker and enterprise data integrations.
- Deployed applications on **AWS and OpenShift ROSA** using **Terraform, Docker and CI/CD**, working within enterprise security and infrastructure constraints.
- Collaborated directly with end users throughout discovery, development, testing and deployment to iterate on requirements, evaluations and workflows.

R&D Mixed Reality & Software Intern Inserm, Paris Sept. 2024 to Jan. 2025

- Developed real time VR and AR software for medical simulation, connecting physical telemetry systems with interactive digital environments.
- Built and optimized low latency communication and telemetry processing pipelines for reliable real time processing of multidimensional data.

EDUCATION

EPITA, M.Eng. Computer Science, AI & Data Science 2021 to 2026

Specialization in Artificial Intelligence and Data Science

Université du Québec à Chicoutimi, Canada 2023

Exchange Semester

Languages: French Native English C1

SELECTED PROJECTS

Mistral AI Hackathon 2nd Place Overall July 2026

- Extended Mistral's Vibe CLI with production oriented agent capabilities and reusable developer tooling during a one day hackathon.
- Developed `/skills` for reusable agent skill management and `/vibe-in-chrome`, enabling browser automation, live testing and direct interaction with web applications.
- Implemented local model discovery and intelligent routing between local and cloud models to optimize execution strategy, token usage and inference costs.
- Tech:** *Python, TypeScript, Chrome Extensions, LLM Agents, Mistral AI*

European Defense Tech Hackathon Offline AI Translation July 2026

- Built an offline Android speech to text translation application for emergency responders operating without network connectivity.
- Integrated on device speech recognition and local language models for private and low latency multilingual communication.
- Tech:** *Kotlin, Android, whisper.cpp, llama.cpp, Qwen 2.5*

AMD Open Robotics Hackathon Autonomous Manipulation Dec. 2025

- Designed robotic manipulation pipelines combining imitation learning, computer vision and perception algorithms for real world tasks.
- Optimized model inference on AMD ROCm for real time robotic perception.
- Tech:** *Python, PyTorch, LeRobot, AMD ROCm*

Medical Image Segmentation Ovarian Cancer 2024

- Developed deep learning models for semantic medical image segmentation, ranking among the top finalist teams out of 40+ participants.
- Tech:** *Python, TensorFlow, CNNs, Medical Imaging*

ADDITIONAL INFORMATION

Tennis: French ranking 4/6 **Interests:** Artificial Intelligence, Software Engineering, Finance, Robotics
