PROFESSIONAL SUMMARY

Engineer graduated from EPITA in Artificial Intelligence and Data Science, now an Associate Consultant in AI Platforms within Sia Partners' GenAI Solutions practice. I design and build AI applications and backend systems, from business need to production. Experience in Python, cloud infrastructure, AI agents and enterprise integration. **2nd place overall at the Mistral AI Hackathon 2026.**

TECHNICAL SKILLS

Programming	Python, C++, C, C#, TypeScript, JavaScript, SQL, Kotlin
Backend & Data	FastAPI, REST APIs, PostgreSQL, Linux, Git, NGINX, Vector Databases
Cloud & Infrastructure	AWS, Docker, Terraform, OpenShift ROSA, Kubernetes, CI/CD
AI Engineering	LLM Agents, RAG, Tool Calling, LLM Orchestration, LangChain, Hugging Face, PyTorch, LLM Evaluation

PROFESSIONAL EXPERIENCE

Associate Consultant, AI Platforms Sia Partners, Paris Sept. 2026 to Present

- Integration into the GenAI Solutions practice within the AI Platforms & Data Science team, with contribution to the strategy, design and deployment of AI platforms for enterprise clients.
- Translation of client needs into robust AI products, automated workflows and enterprise integrations, bridging business requirements and technical implementation.
- Contribution to consulting engagements across the GenAI platform lifecycle, from opportunity framing and solution design to delivery and adoption support.
- Utilization of LLM based platforms and cloud infrastructure for the construction of scalable, production oriented AI solutions for clients across industries.
- Tech: GenAI platforms, LLMs, Python, cloud, consulting methods*

AI Engineer Intern Safran, Paris Feb. 2026 to July 2026

- Attachment to the Internal Audit teams, tasked with the translation of ambiguous business requirements into production ready AI workflows, via the design of agentic applications for document analysis, findings extraction and automated reporting with **Python, FastAPI, LangChain and AWS Bedrock**.
- Development and deployment of full stack backend services on **AWS and OpenShift ROSA** with **Terraform, Docker**, in compliance with enterprise security and infrastructure constraints.
- Direct collaboration with end users throughout discovery, development and deployment to iterate on requirements and workflows.

R&D Mixed Reality & Software Intern Inserm, Paris Sept. 2024 to Jan. 2025

- Development of real time VR and AR software for medical simulation, connecting physical telemetry systems with interactive digital environments.

EDUCATION

EPITA, M.Eng. Computer Science, AI & Data Science 2021 to 2026
Specialization in Artificial Intelligence and Data Science

Université du Québec à Chicoutimi, Canada Exchange Semester 2023

Languages: French Native English C1

SELECTED PROJECTS

Mistral AI Hackathon 2nd Place Overall July 2026

- Extension of Mistral's Vibe CLI with production oriented agent capabilities and reusable developer tooling during a one day hackathon.
- Development of `/skills` for reusable agent skill management and of `/vibe-in-chrome`, enabling browser automation, live testing and direct interaction with web applications.
- Implementation of local model discovery and intelligent routing between local and cloud models to optimize execution strategy, token usage and inference costs.
- Tech: Python, TypeScript, Chrome Extensions, LLM Agents, Mistral AI*

European Defense Tech Hackathon Offline AI Translation July 2026

- Design of an offline Android speech to text translation application for emergency responders operating without network connectivity.
- Implementation of on device speech recognition and local language models for private and low latency multilingual communication.
- Tech: Kotlin, Android, whisper.cpp, llama.cpp, Qwen 2.5*

AMD Open Robotics Hackathon Autonomous Manipulation Dec. 2025

- Design of robotic manipulation pipelines combining imitation learning, computer vision and perception algorithms for real world tasks.
- Tech: Python, PyTorch, LeRobot, AMD ROCm*

Medical Image Segmentation Ovarian Cancer 2024

- Deep learning models for semantic medical image segmentation; finalist among more than 40 teams.
- Tech: Python, TensorFlow, CNNs, Medical Imaging*
